▼ ❗ Ensure back-end infrastructure exists

0s

🔗

⬇️

```
#!/bin/bash -eo pipefail
aws cloudformation deploy \
  --template-file .circleci/files/backend.yml \
  #--tags project=your-tag \
  # --stack-name "your back-end stack name with workflow id" \
  # --parameter-overrides ID="your workflow id"
exit 1

usage: aws [options] <command> <subcommand> [<subcommand> ...] [parameters]
To see help text, you can run:

    aws help
    aws <command> help
    aws <command> <subcommand> help

aws: error: the following arguments are required: --stack-name

Exited with code exit status 252
CircleCI received exit code 252
```
